Analysis

Asymptotic Analysis

Dr. Muhammad Uzair School of Computer and Mathematical Sciences

• Asymptotic analysis is a branch of mathematics that studies the behavior of mathematical functions as their input become very large

- Asymptotic analysis is a branch of mathematics that studies the behavior of mathematical functions as their input become very large
 - Functions are not studied alone but are studied relative to other functions

- Asymptotic analysis is a branch of mathematics that studies the behavior of mathematical functions as their input become very large
 - Functions are not studied alone but are studied relative to other functions
 - Usually, the growth rate of functions relative to other functions is studied (in computer science)

- Asymptotic analysis is a branch of mathematics that studies the behavior of mathematical functions as their input become very large
 - Functions are not studied alone but are studied relative to other functions
 - Usually, the *growth rate of functions relative to other functions* is studied (in computer science)
- Asymptotic analysis or Asymptotics is the calculus of approximations
 - Approximation of functions by simpler functions

- Asymptotic analysis is a branch of mathematics that studies the behavior of mathematical functions as their input become very large
 - Functions are not studied alone but are studied relative to other functions
 - Usually, the *growth rate of functions relative to other functions* is studied (in computer science)
- Asymptotic analysis or Asymptotics is the calculus of approximations
 - Approximation of functions by simpler functions

• The term "asymptotic" can also be used more broadly to describe situations where two things approach each other or become more similar, but never quite reach a point of perfect equality.

Example

$$f(n) = n^2 + 4n + 7$$
 $g(n) = n^2$

Example

$$f(n) = n^2 + 4n + 7$$
 $g(n) = n^2$

All the below statements mean the same

f(n) is "asymptotically similar" to g(n) as $n \to \infty$ f(n) is "asymptotically same" to g(n) as $n \to \infty$ f(n) is "asymptotically equivalent" to g(n) as $n \to \infty$ f(n) is "asymptotically equal" to g(n) as $n \to \infty$ f(n) is "asymptotic" to g(n) as $n \to \infty$ f(n) or "asymptotic" to g(n) as $n \to \infty$

Example

$$f(n) = n^2 + 4n + 7$$
 $g(n) = n^2$

• All the below statements mean the same

$$f(n)$$
 is "asymptotically similar" to $g(n)$ as $n \to \infty$ $f(n)$ is "asymptotically same" to $g(n)$ as $n \to \infty$ $f(n)$ is "asymptotically equivalent" to $g(n)$ as $n \to \infty$ $f(n)$ is "asymptotically equal" to $g(n)$ as $n \to \infty$ $f(n)$ is "asymptotic" to $g(n)$ as $n \to \infty$ $f(n)$ is "asymptotic" to $g(n)$ as $n \to \infty$

is an asymptotic notation used to convey the message that a function is asymptotically similar/same/equivalent/equal to another function

Asymptotic Notations

- A way to communicate the relationship between the behaviors of different functions
 - Usually, the relationship between the *growth rates* of different functions (in computer science)

Asymptotic Notations (Relation formulas)

$$f(n) = O(g(n))$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \mid \exists c > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \leq \mathbf{cg}(\mathbf{n})$$
 Asymptotic upper bound

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n}))$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \exists c > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \geq \mathbf{cg}(\mathbf{n}) \quad \text{Asymptotic lower bound}$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n}))$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \exists c_1, c_2 > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad \mathbf{c_1}\mathbf{g}(\mathbf{n}) \leq |\mathbf{f}(\mathbf{n})| \leq \mathbf{c_2}\mathbf{g}(\mathbf{n}) \quad \text{Asymptotic tight bound}$$

$$f(n) = o(g(n))$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \forall \mathbf{c} > \mathbf{0}, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \leq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$|\mathbf{f}(\mathbf{n})| \leq \mathbf{cg}(\mathbf{n})$$

upper bound that is not asymptotically tight

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n}))$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \forall \mathbf{c} > \mathbf{0}, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \geq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$|\mathbf{f}(\mathbf{n})| \geq \mathbf{cg}(\mathbf{n})$$

lower bound that is not asymptotically tight

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n})$$

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n}) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 1$$

$$g(x) \in O(g(x))$$
 THE UNI

$$f(n) = O(g(n))$$
 can also be written as $f(n) \in O(g(n))$

Asymptotic Notations (Limits)

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0, \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 0$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = \infty$$

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n}) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 1$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Drop the lower order terms

$$3n^3$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Drop the lower order terms

$$3n^3$$

• Drop the constant factors

$$n^3$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Drop the lower order terms

$$3n^3$$

• Drop the constant factors

$$n^3$$

Let's call it
$$g(n) = n^3$$

• Identify the dominant term

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

• Drop the lower order terms

$$3n^3$$

• Drop the constant factors

$$n^3$$

Let's call it
$$q(n) = n^3$$

• Identify the asymptotic notations

Analyze f(n) and g(n) using relation or limits formulas

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$
 $g(n) = n^3$

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \quad \exists c > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \leq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \exists c > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \geq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \exists c_1, c_2 > 0, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad \mathbf{c_1}\mathbf{g}(\mathbf{n}) \leq |\mathbf{f}(\mathbf{n})| \leq \mathbf{c_2}\mathbf{g}(\mathbf{n})$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \forall \mathbf{c} > \mathbf{0}, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \leq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \forall \mathbf{c} > \mathbf{0}, \exists n_0 > 0 \text{ such that } \forall n \geq n_0 \quad |\mathbf{f}(\mathbf{n})| \geq \mathbf{c}\mathbf{g}(\mathbf{n})$$

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$
 $g(n) = n^3$

$$|f(n)| \le cg(n)$$
 for a $c > 0$ and $n_0 > 0$

$$f(n) = \Omega(n^3)$$
 YES

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{n^3}) \text{ YES}$$

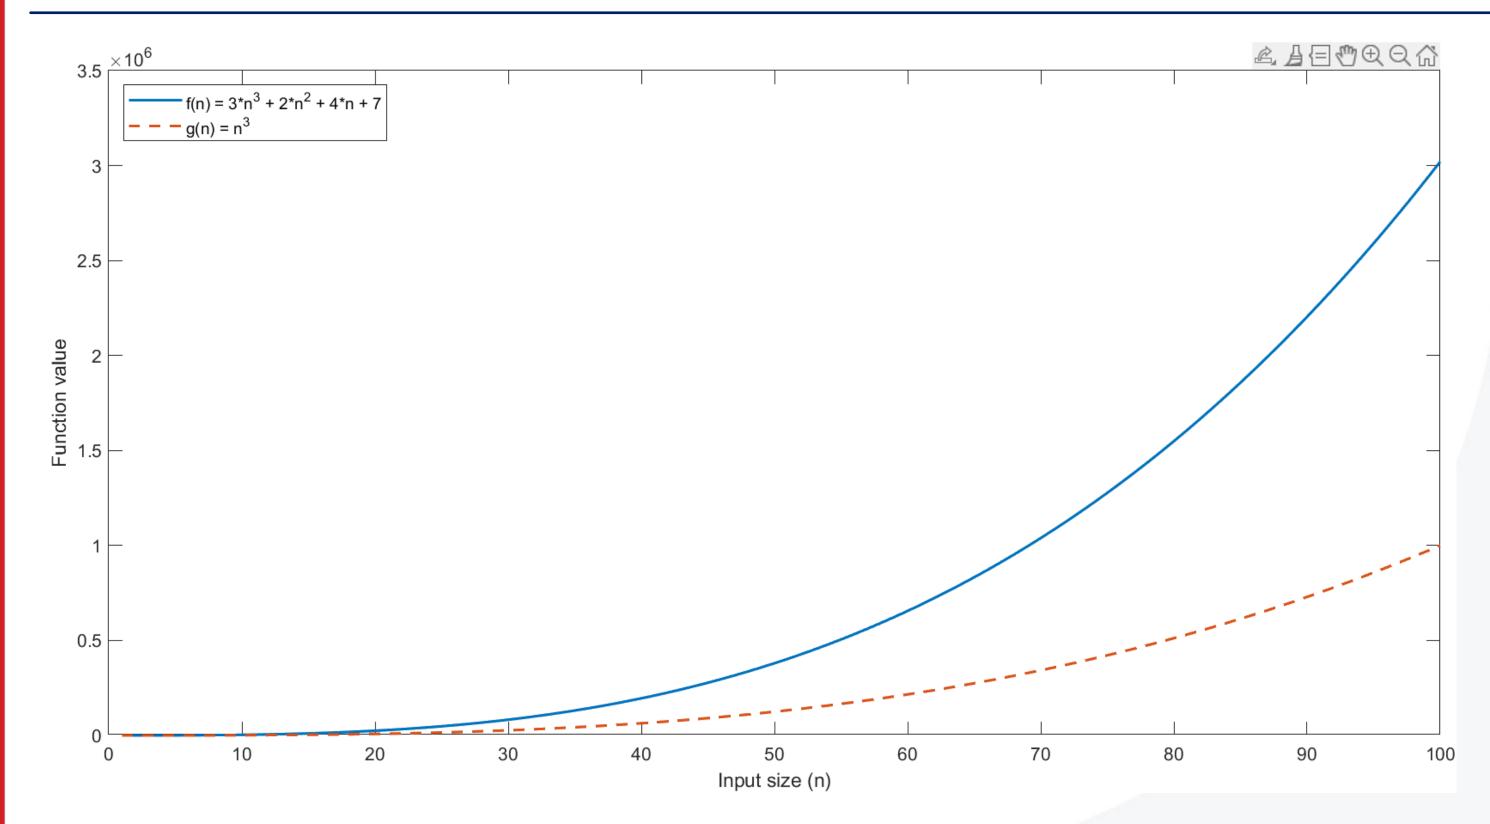

$$f(n) = o(n^3)$$
 NO

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{n^3})$$
 NO

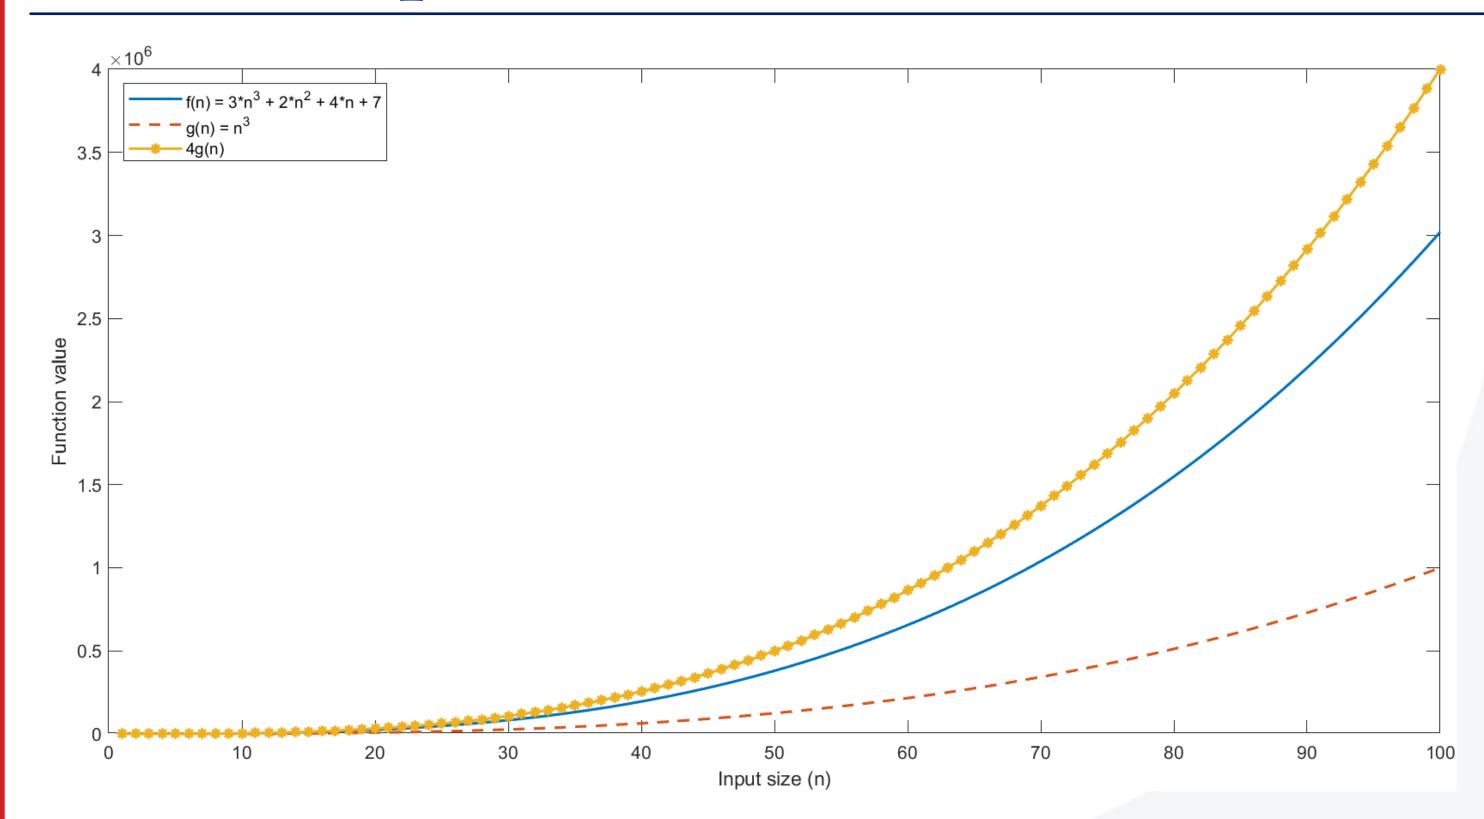

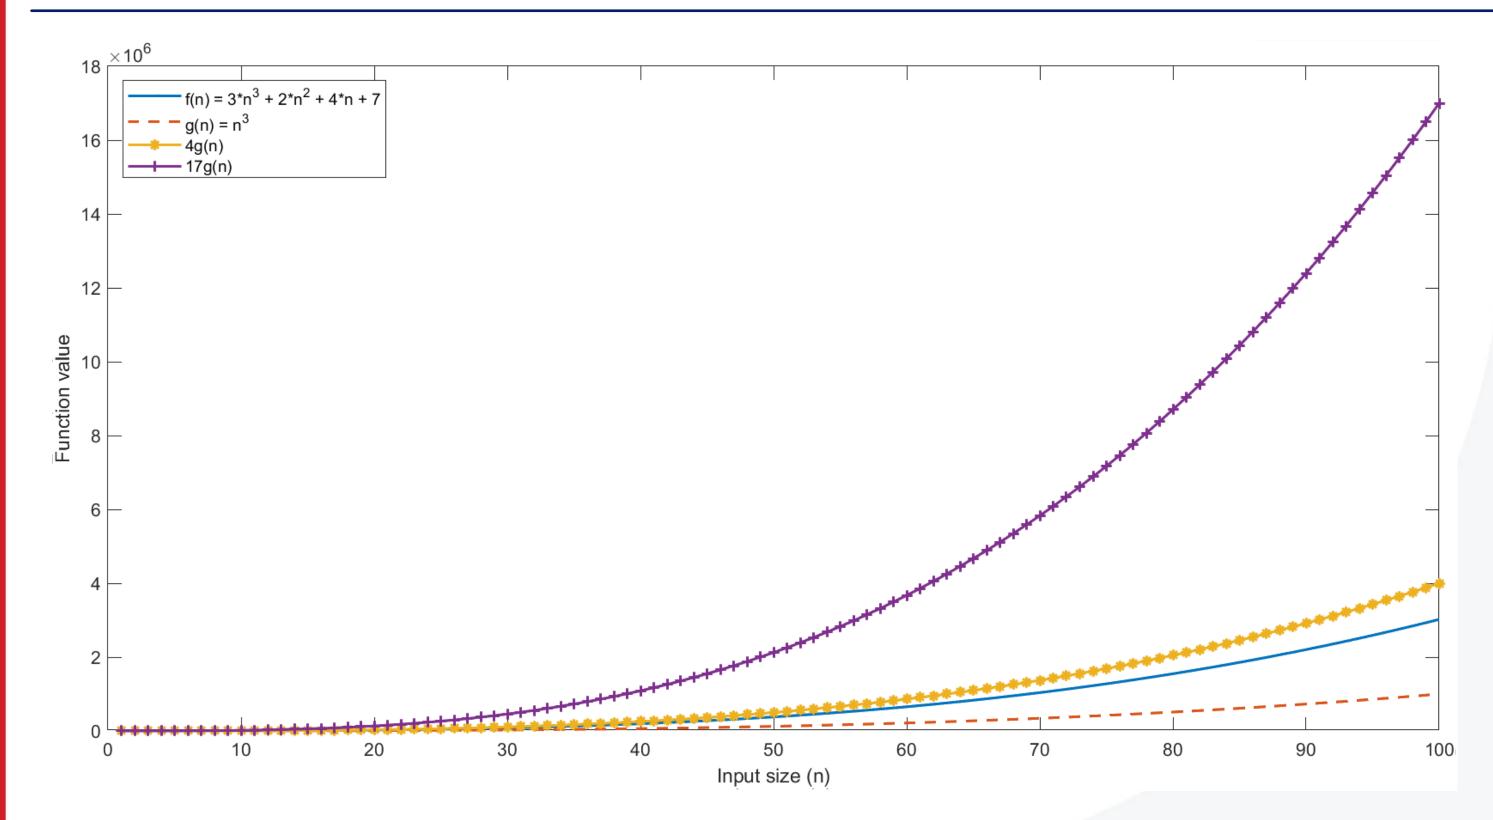

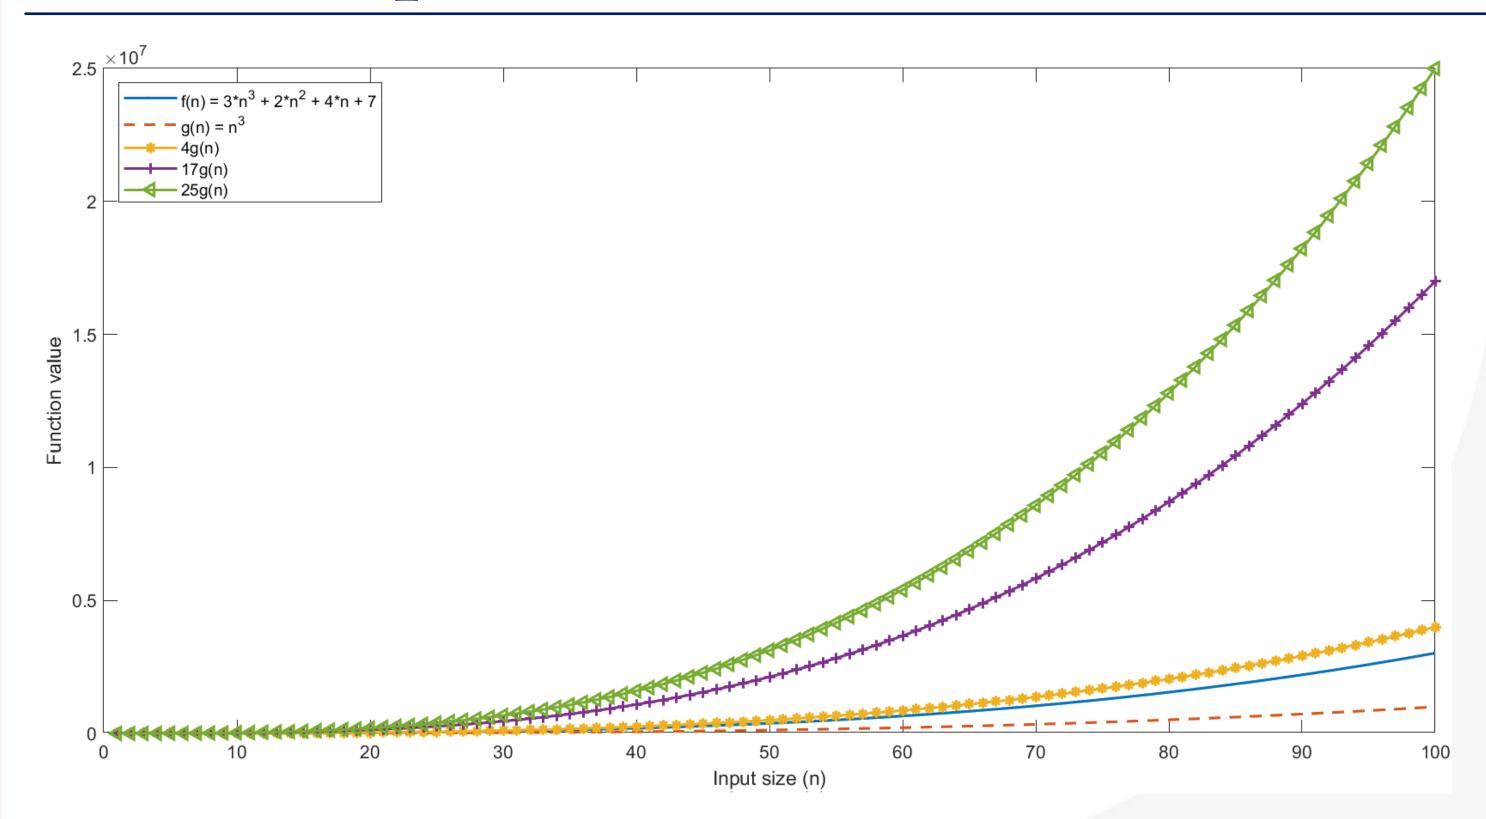

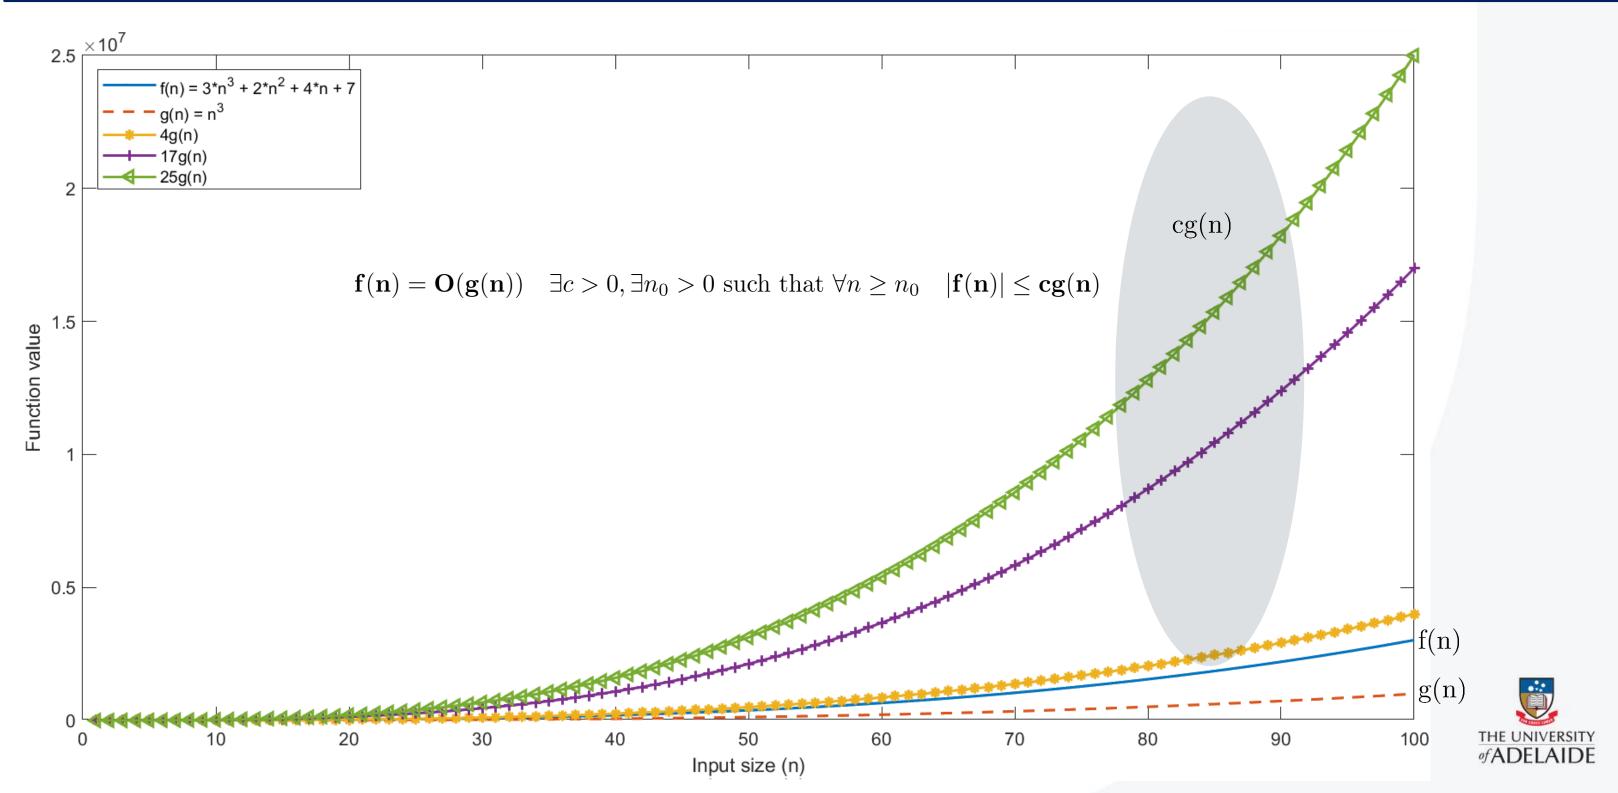

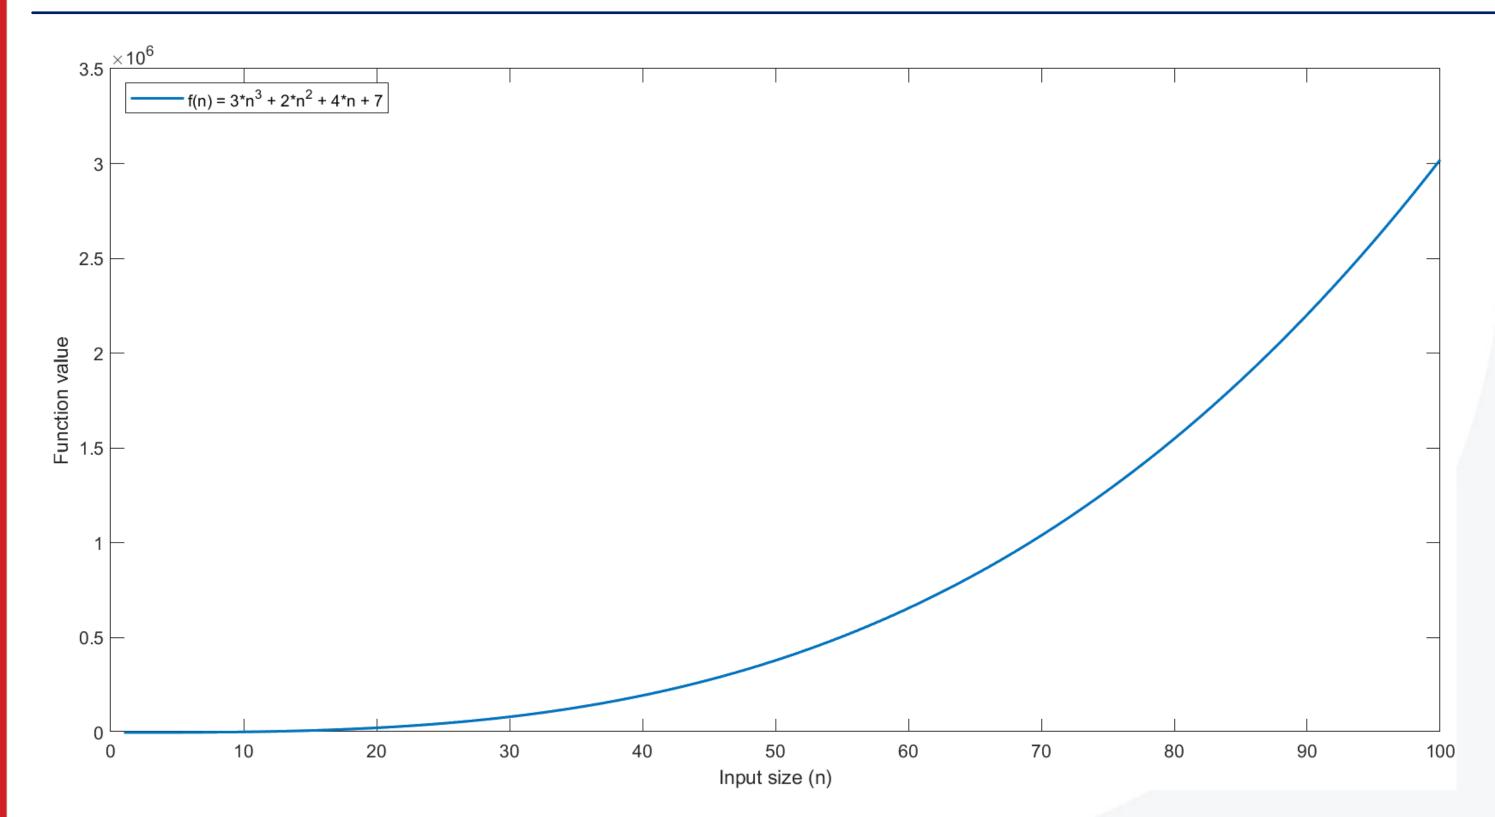

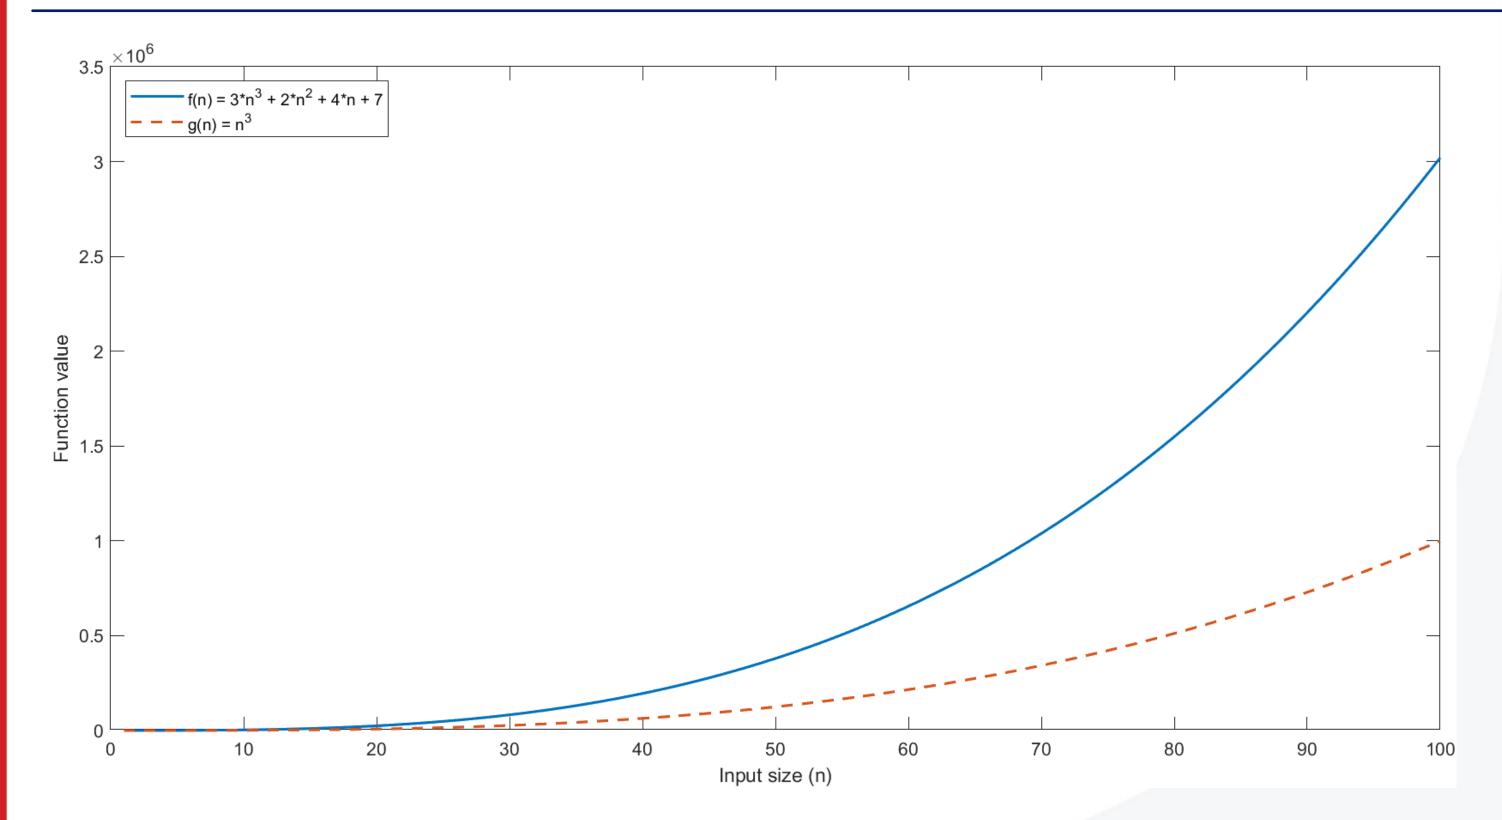

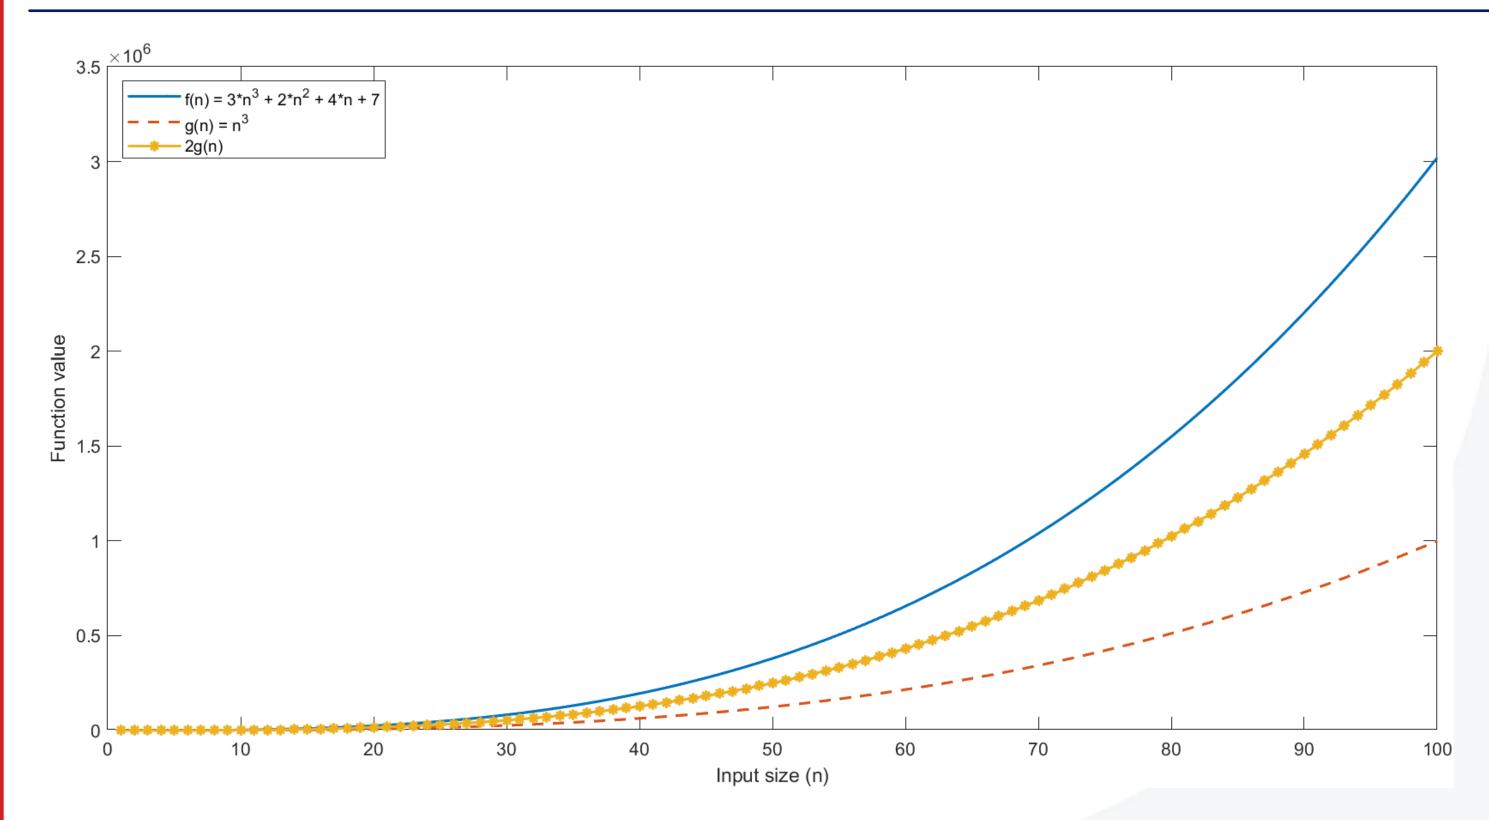

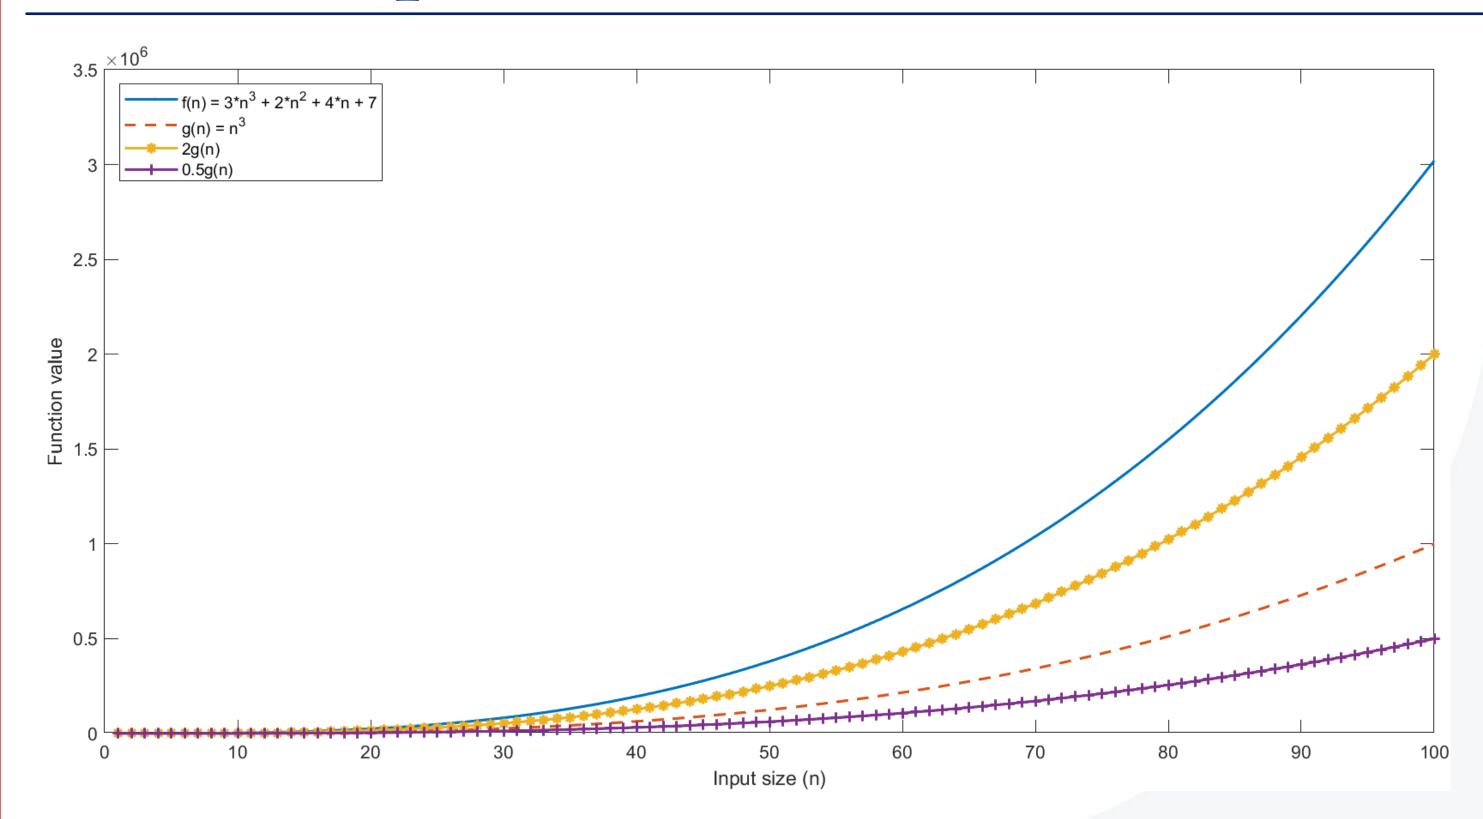

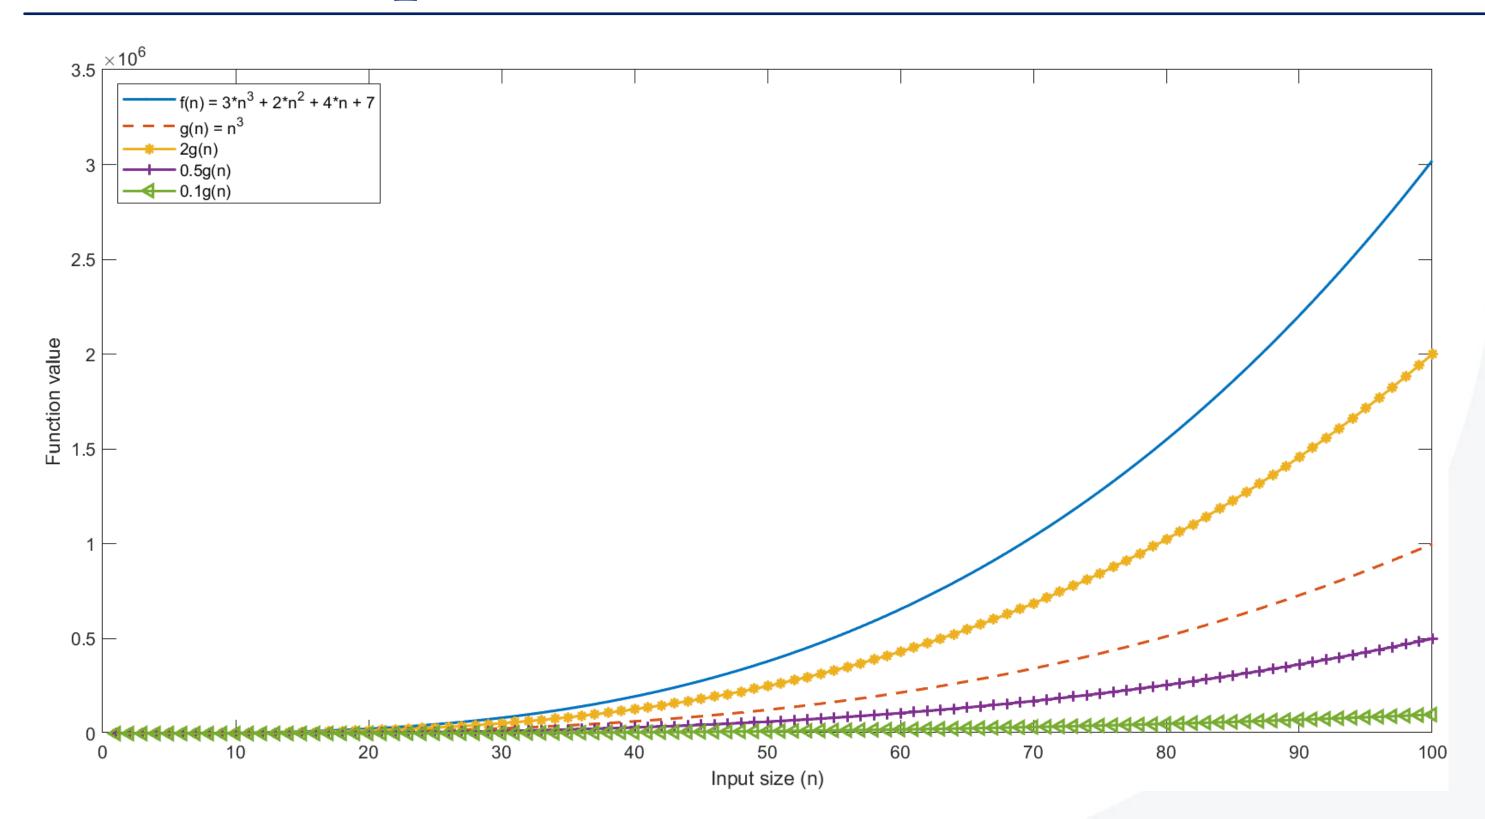

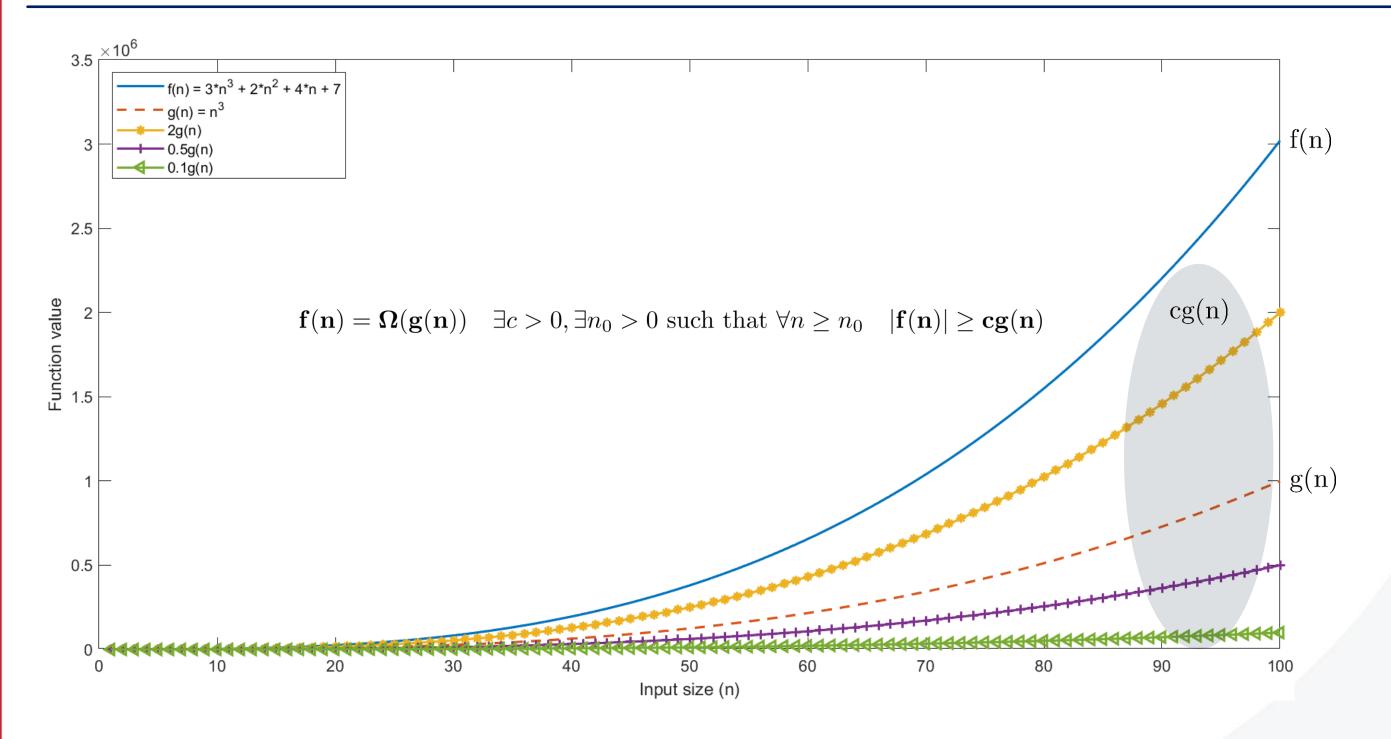

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

$$1 < log(n) < \sqrt{n} < n < nlog(n) < n^2 < \dots < n^3 < \dots < 2^n < e^n < \dots < n^n$$

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

$$1 < log(n) < \sqrt{n} < n < nlog(n) < n^2 < \dots < n^3 < \dots < 2^n < e^n < \dots < n^n$$

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

$$1 < log(n) < \sqrt{n} < n < nlog(n) < n^2 < \dots < n^3 < \dots < 2^n < e^n < \dots < n^n$$

$$\Omega$$

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

$$1 < log(n) < \sqrt{n} < n < nlog(n) < n^2 < \dots < n^3 < \dots < 2^n < e^n < \dots < n^n$$

While it is mathematically correct to say that $f(n) = O(2^n)$ or even $f(n) = O(n^n)$, it does not capture the growth rate in a useful way

$$f(n) = 3n^3 + 2n^2 + 5n + 7$$

$$1 < log(n) < \sqrt{n} < n < nlog(n) < n^2 < \dots < n^3 < \dots < 2^n < e^n < \dots < n^n$$

$$\Omega$$

While it is mathematically correct to say that $f(n) = O(2^n)$ or even $f(n) = O(n^n)$, it does not capture the growth rate in a useful way

In general, the most useful asymptotic notation is one that accurately captures the dominant term or terms of the function, e.g. the smallest upper bound or the largest lower bound.

Example

$$f(n) = \sqrt{6n^3 + 7n^2 + 5n + 5}$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0, \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 0$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = \infty$$

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n}) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 1$$

Example

$$f(n) = n^3 \log_2 n \qquad \qquad g(n) = 3n \log_8 n$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0, \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 0$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = \infty$$

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n}) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 1$$

Example

$$f(n) = 8^n$$

$$g(n) = 4^n$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{O}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Omega}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{\Theta}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} \neq 0, \infty$$

$$\mathbf{f}(\mathbf{n}) = \mathbf{o}(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 0$$

$$\mathbf{f}(\mathbf{n}) = \omega(\mathbf{g}(\mathbf{n})) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = \infty$$

$$\mathbf{f}(\mathbf{n}) \sim \mathbf{g}(\mathbf{n}) \quad \lim_{n \to \infty} \frac{\mathbf{f}(\mathbf{n})}{\mathbf{g}(\mathbf{n})} = 1$$
